Summary

Software engineer with 5 years at Salesforce building high performance and highly available systems including code search infrastructure plus internal tooling and AI context engineering for large monorepos as Senior Member of Technical Staff in ADX.

Experience

Senior Member of Technical Staff, Salesforce

April 2025 - Present

Unified Context Engineering, ADX - Hyderabad, India

- Lead development of CodeSearch, an in-house code search tool built to replace Sourcegraph and extend it for Salesforce internal needs, including custom integrations with internal tools.
- Saved over \$2 million in licensing fees.
- Serves 28,000 MAUs and handles 4 million API calls per week.
- Designed a horizontally scalable architecture on Kubernetes that automatically provisions capacity to handle traffic, including large monorepos, without compromising speed.
- Built an SLA-based indexing backend supporting multiple code hosts, code authorization, code ownership, MCP support, streaming APIs, and tight integration with developer experience tools.
- Currently building the infrastructure layer for running AI agents on on-demand workspaces, including monorepos.
- Technologies: Python, Kubernetes, Docker, Multithreading, Go, C++, GitHub, GitLab, Perforce, CMake.

Member of Technical Staff, Salesforce

August 2022 - April 2025

Core-SCM Perforce, Developer Productivity XP - Hyderabad, India

- Expanded Sourcegraph by onboarding code from company acquisitions while maintaining high uptime and solid supporting infrastructure.
- Architected the fastest Sourcegraph instance among all customer instances at the time, as reported by Sourcegraph staff.
- Ran evaluations comparing internal tools against Sourcegraph Cody on Perforce monorepos to assess the efficiency of vector embeddings as code context for code generation.

Associate Member of Technical Staff, Salesforce

June 2021 - August 2022

Core-SCM Perforce, Developer Productivity XP - Hyderabad, India

- Installed and rolled out Sourcegraph inside Salesforce for 15,000 developers following a multi-month proof-of-concept project; maintained and customized the service for internal needs.
- Created and maintained [p4-fusion](#), a multi-threaded Perforce-to-Git converter written in C++, giving Sourcegraph a 100x (99% faster) performance boost on the Perforce monorepo. Published a [blog post](#) and [webinar](#) with Sourcegraph on the project.

Student and Mentor, Google Summer of Code

Summer 2019, Summer 2020

Godot Engine

- Built the Godot [version control integration](#), allowing users to version control their code without leaving the editor; mentored a feature-expansion project in GSoC 2020.
- Technologies: C++, CMake, SCons.

Open Source

[godotengine/godot](#) - Former VCS Maintainer [salesforce/p4-fusion](#) - Maintainer

[godotengine/godot-git-plugin](#) - Former Maintainer [sdslabs/Rootex](#) - Lead Developer

[sdslabs/Rubeus](#) - Lead Developer

Projects

High-Performance C++17 3D Game Engine - [Rootex](#)

2019 - 2021

[SDSLabs](#), IIT Roorkee

- Achieved high performance through a CPU- and memory-cache-efficient Entity Component System and careful memory management in C++, combined with object-oriented design; featured in a [Gamefromscratch review](#).
- Fine-tuned performance-critical subsystems including audio, physics simulation, UI rendering, and the particle engine.

Education

B.Tech, Computer Science and Engineering, [Indian Institute of Technology, Roorkee](#), India

2017 - 2021

Skills

Languages: Python, C++ (proficient); Go, TypeScript, Java, C, PHP, UE4 (comfortable); JavaScript, Bash, C#, Terraform (familiar)

Frameworks & Libraries: Kubernetes, Docker, Flask, FastAPI, Redis, RQ, AWS Boto3, GCP Client APIs, Helix Core C++ API, Win32 API, DirectX 11, OpenGL 3, Unreal Engine 4, Godot Engine, SFML, GLFW (comfortable); DynamoDB, MySQL, OpenStack, Unity 3D, SUMO, ToroPHP (familiar)

Tools: Claude Code, Cursor, GitHub, Perforce, VS Code, Eclipse, Visual Studio, CMake, SCons, Vcpkg, macOS, Linux, Windows
